We've been making security improvements to enable more customers to utilize our hosted platform starting with the 2020.17.0.0 Release. Those improvements required some changes to the allowance of webpage code rendering in user-generated output across the Qualtrax application. As of 2021.33.0.0, no webpage code rendering is allowed in user-generated output, with a couple exceptions we'll discuss below.

Based on the value expressed for formatting via styling tags in some product areas, the ability to render tags used for styling deemed safe has been maintained in the following areas: Custom Field Titles, Custom Field Descriptions, Subform Column Headings, Email Action Editor (Design), Email Reminder Editor (Design), Training Descriptions, Test Intros, Test Questions, Test Answers, Workflow HTML Headers and Footers, and HTML Documents (including HTML Headers and Footers). We are continuing to implement security improvements and plan to continue to allow rendering of HTML in Qualtrax HTML Documents.

This implementation still increases the security of those outputs. The following tags and attributes are allowed in the product areas listed

above:

- *Allowed HTML Tags:* a, abbr, acronym, address, area, article, aside, b, bdi, big, blockquote, br, button, caption, center, cite, code, col, colgroup, data, datalist, dd, del, details, dfn, dir, div, dl, dt, em, fieldset, figcaption, figure, font, footer, form, h1, h2, h3, h4, h5, h6, header, hr, i, iframe, img, input, ins, kbd, keygen, label, legend, li, main, map, mark, menu, menuitem, meter, nav, ol, optgroup, option, output, p, pre, progress, q, rp, rt, ruby, s, samp, section, select, small, span, strike, strong, sub, summary, sup, table, tbody, td, textarea, tfoot, th, thead, time, tr, tt, u, ul, var, wbr
